

SELKAR TRADING FZE

METAL & STEEL

DOWEL BAR

Dowel bars can be used in construction and rehabilitation projects. These are used to extend the service life of a pavement by improving load transfer and helping to prevent faulting at pavement joints
Sizes: 32 to 38 mm in diameter, 460 to 500 mm in length
Specifications: ASTM A615/615M; ASTM A 966/A966M; ASTM A1078/A1078M Grade 40 or Grade 60
Epoxy coated: Jotun Brand

HOT ROLLED STRIPS AND SHEETS

These are used in welding and construction to make railroad tracks and i-beams. Available in different shapes and sizes

STEEL BAR

Steel bar/Reinforcement bar can be used in building projects to provide tensile strength to concrete. It is typically produced as a deformed round, either in straight lengths or in coil. Deformed rounds have ridges or notches to provide greater adherence to the concrete. Steel bar/Reinforcement bars are available on different specifications.

COLD ROLLED STRIPS AND SHEETS

These are applicable to projects where tolerances, surface condition, concentricity and straightness are the major factors. Available in different shapes and sizes

STAINLESS STEEL ANGLE

Stainless steel angles provide support for the walls, ceilings, floor, balconies, and other structures of the building, both internal and external. Available in various lengths, finishes and sizes.

STAINLESS STEEL PIPES

Stainless steel pipes are versatile materials which are used in a large array of applications such as piping and tubing manufacturing. Available in different grades, types and categories.

CARBON STEEL PIPES

Carbon Steel Pipe is used in commercial mechanical systems. Its high strength, good ductility, and adaptability make steel pipe ideal for transporting liquid, gas and vapor. Available in different grades and specification.

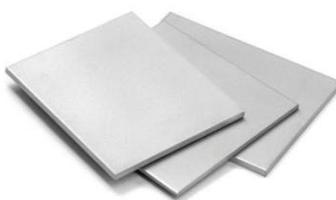

SEAMLESS PIPES

Seamless pipes are useful in different industry sectors such as refineries and petrochemical plants, sugar plants, railways, automobile manufacturing plant, etc. Available in different sizes and specification

STEEL PLATES

Steel Plates are used for structural and construction applications, pressure vessels, marine and offshore equipment and military applications. The grade, elements and parameters of a steel plate are also important in how it is used. These are available in different

MESH

Meshes are used to screen out insects, filtration, shield against radio frequency radiation, etc. Available in different sizes.

NICKEL ALLOY

Nickel Alloys are used in electronics, specialist engineering, etc. they are used because of their corrosion resistance, high temperature strength and their special magnetic and thermal expansion properties. Available in different properties and specifications.
